<sup>1</sup> Participants get one point for walking home from school on day 1 and one point for day 2. The mean of the two-day score is presented. The average estimated percent ranges from 0-1.

Excludes those reporting "other" and "home school."

A box around a group of numbers signifies that differences observed within this group are statistically significant.

Categories sharing a common superscript (a,b,c) are not statistically different from each other (Tukey's test at a procedure-wise error rate=.05).
